

Nectria trial

The nectria trial is carried out at our own location where nectria infections can be created.

The trial is set up according the following EPPO guide lines:

- PP1/152(4) Design and analysis of efficacy evaluation trials
- PP1/181(4) Conduct and reporting of efficacy evaluation trials
- PP1/135(4) Phytotoxicity assessment
- PP1/239(2) Dose expression for plant protection products
- PP1/123(2) Nectria galligena

Trial design:

Location:	The Netherlands, Enspijk
Crop:	Apple, <i>malus domestica</i>
No of trials:	1
No of replications	4
No of applications:	4, before the first application 10 wounds per plot are made and branches with nectria infection are placed in the plot above the wounds.
No of trees:	At least 2
No of assessments:	3
	Phytotoxicity at every assessment date
Yield assessment:	No

Costs per treatment:

Nectria control in apple: € 1100,00 excluding VAT

Estimation of crop destruction per treatment: € 350,00 excluding VAT

- Data is managed in ARM
- The costs mentioned are included a written report in English.
- The costs mentioned are exclusive costs for standard products, crop destruction, costs of plant and infection material, travel expenses and analysis by third parties
- Extra activities will be carried out after our proposal and costs are agreed by the sponsor.

If you like to participate please respond before 01-10-2022
